WHY DTP

In DTP's 36-year journey as a specialist technology provider, we have never seen so much change, and at such pace as today. With IT no longer just about access to services and tools, it's now central to driving enhanced user experiences, as well as providing the opportunity for competitive and reputational advantage.

As a business we try to stay away from the over hyped IT Sector phrase of Digital Transformation. However, this does not mean we shy away from innovation and change, especially when it drives benefits for our clients. As you would expect for DTP to have survived and prospered in our 36 years, we have had to be nimble and responsive to our clients ever changing and evolving requirements.

The other thing different about DTP is we are a dedicated HP partner, and have resisted the temptation to become a multi-brand supermarket, preferring to invest our effort and resources into being the best we can be around a single brand, HP. This is recognised by DTP having held HP's most prestigious top level Partner status since HP's Partner First Programme began.

Our longevity in partnering with HP also extends into our partnership within the National Notebook and Desktop Agreement (NDNA), which goes back over 20 years, with our HP dedication allowing us to get the best out of HP for our clients.

Based in Yorkshire - and proud to be so - we do have staff and resources across the whole of the UK giving us true national coverage. We understand and have comprehensive knowledge of both the public and private sectors, their needs, the pressure they are facing as well as direction of travel, so we can align ourselves to both enhancing and making those journeys easier, as a true partner would.

One great example of this is in the area of sustainability, where not only do we partner with HP who have been recognised for being at the forefront of design and manufacture for the environment, with ocean bound plastics being used within every device HP produces, but we build sustainability into everything we do:

- from delivery using our own hybrid delivery fleet for consolidated deliveries
- having our own packaging recycling plant at our Leeds logistics centre, so no packaging goes to landfill
- developing our own carbon offset service, so the technology you purchase can be offset by UK planting, which we make visible via carbon offset labels on each device, with a QR code so the user can learn more
- Partnering with HP to leverage their Erskine (Glasgow) circular economy/ asset renewal centre to extend the life of technology wherever possible, and environmentally disposing of any assets that are at their true end of life

Of course, this is all underpinned by our ISO14001 accreditation, and our target to achieve Carbon neutrality by the end of 2025, as we have to recognise that there is No PLANet B.

BEYOND THE DEVICE

As well as being a top level HP partner, we are also a HP service and support partner, allowing us to offer warranty and support services on behalf of HP, and even training and accrediting your staff to become approved providers, which has allowed a number of our clients to become self-maintainers.

But for those who aren't, our accreditation, experience and expertise allows us to provide not only an enhanced maintenance and service experience, but also services such as automated asset management and comprehensive security services. There are all monitored and managed from DTP Leeds based service centre, underpinned by our ISO9001, and ISO27001 accreditations.

So please don't hesitate to get in touch to learn more about DTP, a Point of View on how various areas of technology are driving or supporting change, or just for a quote.

ENVIRONMENT

Our DTP Zero Programme allows us to continue the great initiatives we already have in place, drive on-going environmental improvements, and leverage the sustainability focus and leadership from HP. By leading the sustainable impact conversation, it is our hope that we can build rich relationships with our customers and support them on their environmental journeys too. As with any successful programme, DTP Zero centres around a goal-orientated ambition; **for our organisation to become Carbon Neutral by 2025.**

Every initiative, every employee and every process will help to move us in the right direction towards our target. It is a bold aspiration, but one we are confident we can achieve. Our hard work in this area over the last few years means we are already well on our way. This is not just a box ticking exercise. It is something we want our colleagues to believe in, get involved in and be able to articulate our sustainability journey. We will also proactively work with HP, as well as our clients, to ensure DTP Zero's success.

We are already addressing one of the largest sources of carbon emissions by the introduction of electric delivery vehicles and are working towards increasing these numbers as battery technology improves along with the range. It is envisaged that our fleet will be 100% electric once technology and range of these vehicles improve. As soon as practicable the vehicles used to deliver to our clients will be all electric.

DTP has hugely increased the amount of waste that we recycle every year and in the last 12-months 0% of our waste has been sent to landfill with 100% of all recyclable items having been recycled. We first achieved our ISO 14001:2015 accreditation in 2018, further to investing in a packaging re-cycling plant, which allows us to flat pack and bale cardboard as well as shred and compact polystyrene for re-cycling back into the packaging supply chain.

In early 2022, HP expanded its Amplify Impact channel partner programme which DTP is part of to empower more than 10,000 partners in over 40 countries to advance their own sustainable impact journeys. HP Amplify Impact is an industry-first partner assessment, resource and training programme aimed at driving meaningful change across three Sustainable Impact pillars – Planet, with an emphasis on climate change; People with an emphasis on human rights and social justice; and Community with an emphasis on bridging the digital divide. By pledging to join the HP Amplify Impact programme, DTP will work with HP to assess our own practices while tapping into HP's extensive investments and initiatives.

The HP Amplify Impact program helps to empower partners to set bold, long-term objectives to drive positive impact. Participating partners will be recognised via certification and an annual awards programme. The mission is to drive accountability throughout the IT industry across the following key pillars:

Planet: Drive toward a net-zero carbon, fully regenerative circular economy while creating the industry's most sustainable portfolio of technology, services and solutions.

People: Respecting human rights, enabling people across the value chain to thrive and cultivating a diverse, equitable and inclusive (DE&I) culture through initiatives such as the HP Racial Equality and Social Justice Task Force.

Community: Empower communities through the power of technology. Help eliminate the digital divide that prevents too many from accessing the education, jobs and healthcare needed to thrive.

DTP ZERO

As part of our DTP Zero project, we are excited to introduce and boldly promote DTP Zero Print and DTP Zero Compute. As a technology solution provider, we recognise it is our responsibility to not only champion our own environmental impact but also encourage and support our customers with their sustainability journeys.

We appreciate it can be difficult to balance environment factors with business requirements, especially when those decisions can impact your operations. Our DTP Zero initiatives guarantee the best of both worlds.

In partnership with HP's certified carbon neutral Managed Print Service (MPS), DTP Zero Print offsets the entire carbon footprint of your printer fleet, whilst DTP Zero Compute is our own programme, which covers the carbon offsetting of your end user devices for 3, 4 or 5 years.

We recognise that sustainability is so much more than a box ticking exercise. DTP Zero initiatives are not just earth-friendly, they provide long term peace of mind. Neutralising your device emissions is only the start of helping facilitate a more sustainable workplace. It's one less concern and allows you to focus your environmentally conscious efforts elsewhere, while your print and compute operations continue as usual.
